EXPERIENCE

ZerooneSoft, Remote - Junior Flutter Dev

May 2024- June 2025

- Integrated backend using Firebase services and GetX state management architecture.
- Played an active role in mobile app development using the Flutter framework; accurately and promptly implemented UI designs received via Figma into the project.
- Integrated data models from the backend team into the project using a clean and maintainable code structure; provided technical support when backend issues arose by adapting to the file structure.
- Worked with Android Studio; maintained version control via GitHub using a branching structure and respecting task priorities to avoid merge conflicts.
- Communicated effectively in English with international (especially Russian) teammates and successfully managed intra-team coordination.
- Took an active role in testing, building, and publishing processes of apps; ensured deployment via Google Play Console.

Published Apps:

- **Advisor Map** – [Play Store Link](#)
An interactive, map-based app that allows users to find various advisors based on their location.
- **Oisbende** – [Play Store \(Closed Test\)](#)
A platform where job seekers can view job postings on a map and apply based on location.
- **HizmetKalemi** – [Play Store \(Closed Test\)](#)
An employer app to post job listings with details like time and specific requirements.

SKILLS

- Flutter & Dart(5)
- Mobile Applications
